Selection of NABL Accredited Lab for Quality testing of Linen & Water (Used especially in Dialysis Centers) Samples at Public Health Facilities

Background:

NABL accreditation ensures that the testing laboratory adheres to international standards and is competent to perform quality tests. As a move to ensure quality in service delivery at public health facilities, quality testing of linen & water (Used especially in Dialysis Centers) is proposed.

As Linen is being supplied by Private Agencies as part of "Nirmal Scheme", it is essential to check its quality as these are being used for patients in the public health facilities.

Similarly, management of Dialysis Centers is being outsourced. So, the NABL accredited labs can test the water quality used in dialysis centers which is crucial for ensuring patient safety during hemodialysis, as dialysis patients are exposed to large volumes of water.

Tasks: The selected lab will perform following tests & in given frequency as detailed below:

- **Linen**
 - Recommended Tests- Tensile Strength, Steam Durability, Microbial Cleanliness and Biocompatibility as detailed out in Annexure-1.
 - Frequency of Tests
 - The above tests shall be conducted for each batch of new linen supplied for use in public health facilities
 - Routine testing for microbial contamination at intervals of half-yearly after use
 - **Sample size:**
 - **For New Supplies** - Use random Sampling method to collect linen from the stack & give for test, if the supply size is more than 3200 pcs, the sample size is 100 pcs & if the supply size is less than 3200 pcs, the sample size is 63 pcs for new Linens. In case the supply size is 1000 pcs or less, in that case sample size shall be taken as 3% of the supply size.
 - **For Used Linen** - Linen shall be collected from each site of use (at least from DHH, SDH & CHC/UHC & mostly from critical care units) but limited to 30 pcs in each quarter (irrespective of number of Linens used in the district during that period) & give for test on half- yearly basis.
- **Water in use at Dialysis Centre** – As per GoI guidelines (Page-37), the water treatment system components are arranged and maintained so that bacterial & chemical contaminant level in the product water does not exceed the standards for hemodialysis water quality. Hence, Quarterly sample shall be sent to the selected lab for testing (Parameters of tests proposed is at Annexure-2).
